5 Adding a new development

6 The interactive site plan

7 House types

8 Finishing a development

9 Company details

10 Photos, PDFs and search engines

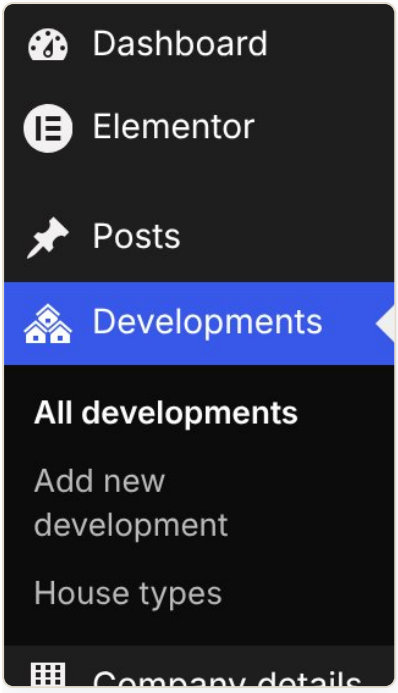

11 Quick reference

12 If something doesn't look right

THE SHORT VERSION

Almost everything you will do day to day happens in one place: **Developments** in the left-hand menu. Open a development, change what you need in its boxes, then press Update. The development page, the site plan, the plot tables, the home page and the developments pages all update on their own.

I Logging in and finding your way

The left-hand menu

1. Go to your website address followed by **/wp-admin**. For example **premierpropertycentral.co.uk/wp-admin**.
2. Enter your username and password then press **Log In**.
3. You will see the admin area. The menu down the left-hand side takes you to each part of the website.

The parts of the menu you will use most are:

Developments	Every development with its plots, prices, photos and site plan. **House types** sits underneath it.
Company details	Your phone number, email, address and the figures on the home page.
Media	Every photo and PDF uploaded to the website.
Pages	The home, About us, Contact us and developments pages. These are laid out with Elementor.

SAVING YOUR CHANGES

Nothing changes on the live website until you press the blue Update button on the right of the screen (it says Publish on something new). If you close the page without pressing it your changes are lost.

2 How the website fits together

There are three things to know about. Once you have these the rest of the guide is straightforward.

Development
A site such as Brunt Lane. It has its own page with photos, a description, the site plan and a list of every plot.

→ has

Plots
One row for each home on the site, with its plot number, price and status: available, reserved, coming soon or sold.

→ uses a

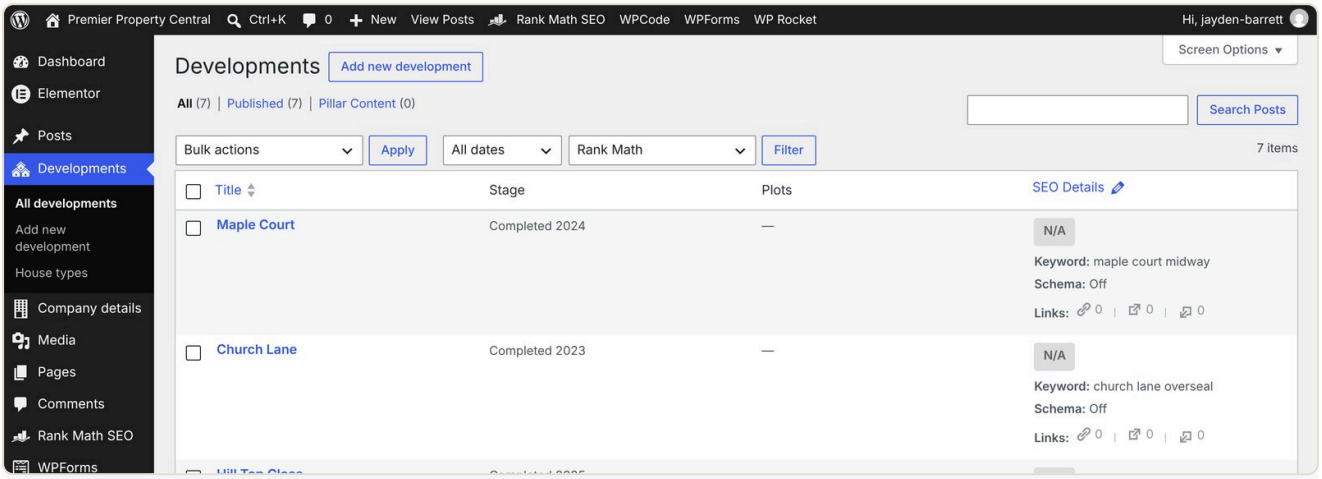

House type
The design of the home, such as Type C. It holds the picture, room sizes, floor plans and the PDF brochure.

A house type is written once and then used by every plot built to that design. If Plots 6, 7 and 8 are all Type C you only add the Type C floor plans once. Each plot then picks Type C from a list.

Developments are either **current** (selling now) or **completed**. The website puts each one on the right page by itself.

The developments list

Click **Developments** in the menu to see them all. The list shows each development's stage and how many of its plots are available, reserved and sold. Click a name to open it.

Developments › All developments

Inside a development

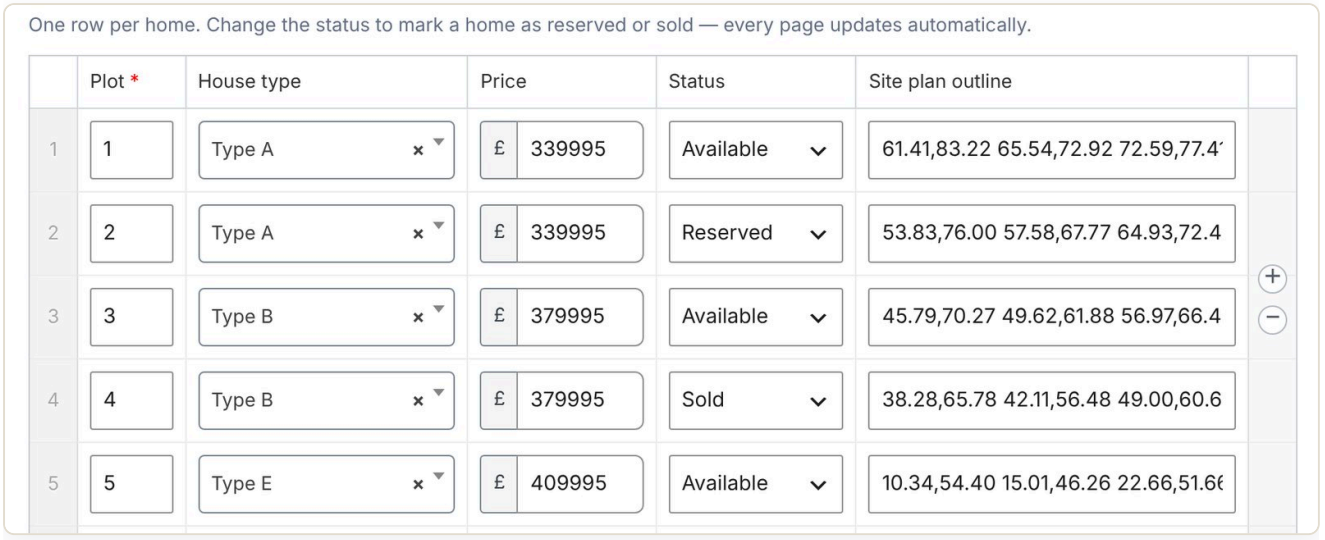

When you open a development its details are in a box called **Development details** with two tabs at the top:

Overview	Where it is, its stage, the main photo, the headline, the description, key features and the photo gallery.
Plots & site plan	The site plan image and the table of plots. This is the tab you will use most.

3 Marking a home reserved or sold

This is the job you will do most often. It takes under a minute.

1. Click **Developments** in the left-hand menu then click the name of the development.
2. Click the **Plots & site plan** tab and scroll down to the **Plots** table.
3. Find the plot and change its **Status** dropdown. To change the price type the new figure in the **Price** box.
4. Press Update on the right of the screen.

The Plots table. Each row is one home.

What each column means

Plot	The plot number as it appears on the site plan. Required.
House type	Which design is built on this plot. Pick it from the list. The bedrooms, floor area and floor plans come from the house type.
Price	Numbers only, with no £ sign or commas. Type **339995** and the website shows £339,995. Leave it empty if the price isn't set yet.
Status	Available, Reserved, Coming soon or Sold. See below.
Site plan outline	Filled in for you by the site plan outliner (section 6). There is no need to type in this box.

What visitors see for each status

AVAILABLE	For sale now. Counted in "homes available" and used for the "from" price.

RESERVED	Shown as reserved. Not included in the "from" price.
COMING SOON	Shown as coming soon. Its price is included in the "from" price so buyers can see what to expect.
SOLD	Greyed out with the price crossed through. It stays on the plan so buyers can see how well the site is selling.

PLOT	HOUSE TYPE	BEDROOMS	SQ FT	PRICE	STATUS
1	Type A	4	1,066	£339,995	AVAILABLE
2	Type A	4	1,066	£339,995	RESERVED
3	Type B	4	1,191	£379,995	AVAILABLE
4	Type B	4	1,191	~~£379,995~~	SOLD
5	Type E	4	1,284	£409,995	AVAILABLE
6	Type C	4	1,258	~~£399,995~~	SOLD

The same plots on the development page. Plots 4 and 6 are sold.

4 Adding, removing and reordering plots

Adding a plot

1. Open the development and click the **Plots & site plan** tab.
2. Press the blue Add plot button under the Plots table. A new empty row appears at the bottom.
3. Fill in the plot number then choose the house type, the price and the status.
4. If the development has a site plan draw around the new plot with the outliner (section 6).
5. Press Update.

> **TIP**
> To add a plot in the middle of the table hover over a row and click the small **+** on its right. A new empty row is added next to it.

Removing a plot

Hover over the row and click the small **–** on its right (confirm if asked) then press Update. A sold plot doesn't need removing. Set it to Sold instead so it still shows on the plan.

Changing the order

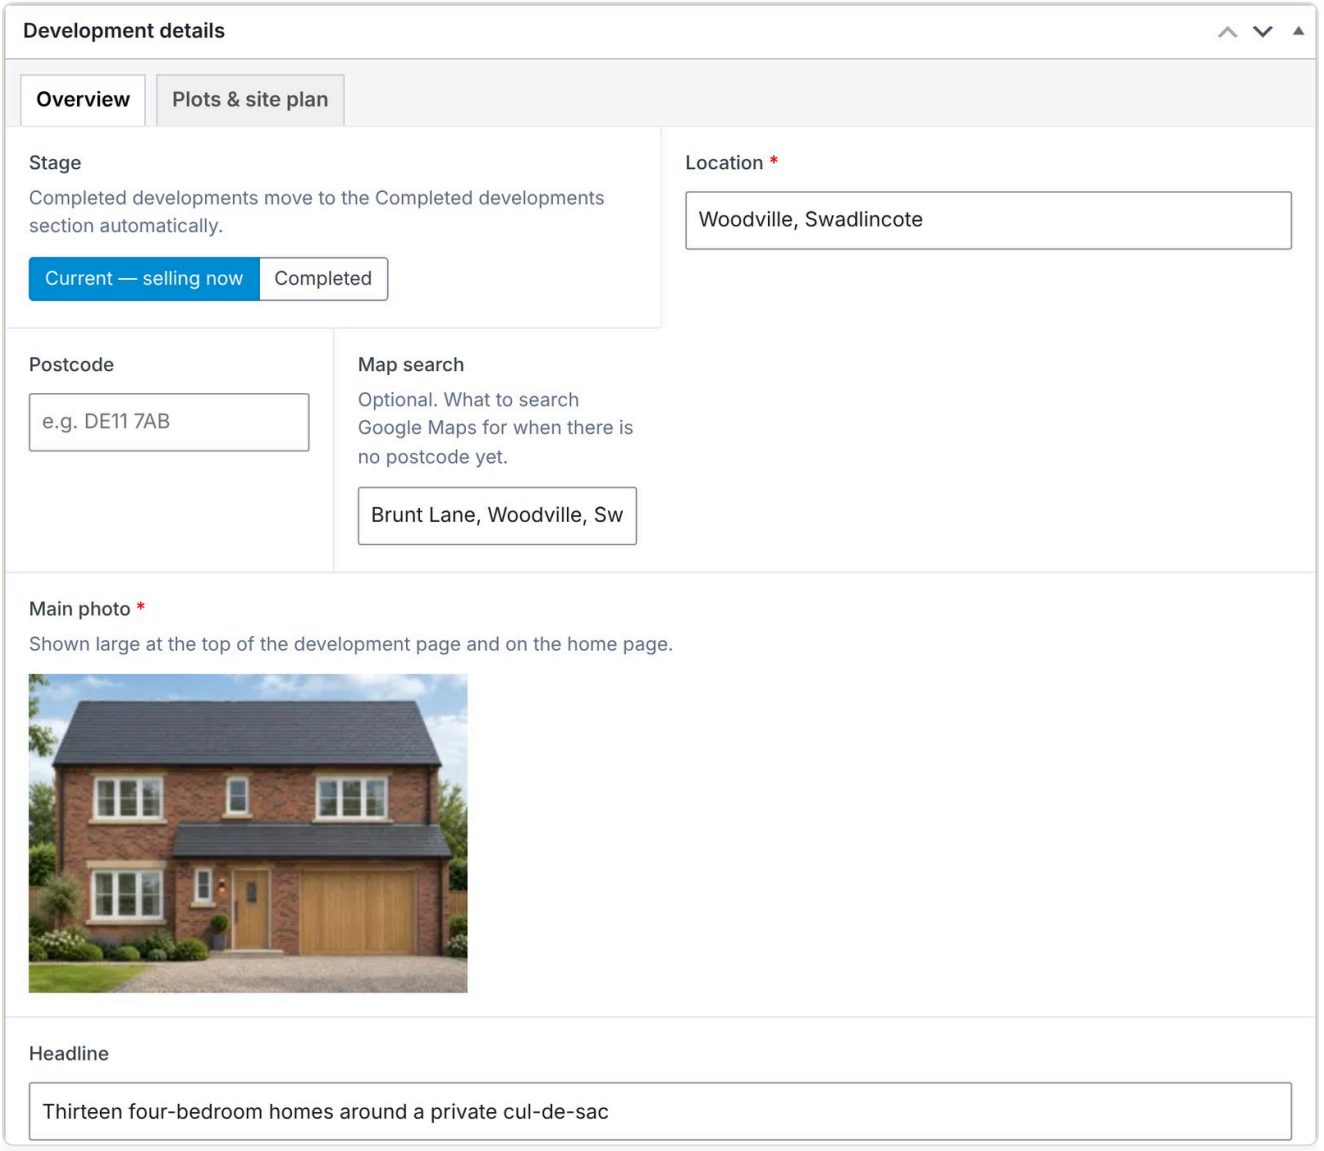

Plots are shown in the order of the table. To move one click and hold the grey row number on its left then drag it up or down. Press Update when you are done.

Changing a whole development at once

There is no limit to how many rows you change before pressing Update. You can mark several plots sold, change a few prices and add a new plot then save them all together.

5 Adding a new development

1. In the left-hand menu hover over **Developments** and click **Add new development**.
2. Type the development's name in the title box at the top, for example **Brunt Lane**. This also becomes its web address: **/developments/brunt-lane/**.
3. Fill in the **Overview** tab using the table below. Boxes marked with a red star must be filled in.
4. Click the **Plots & site plan** tab. Upload the site plan if you have one then add a row for each plot. If its house types don't exist yet add those first (section 7) then come back to choose them.
5. Press Publish. The development appears on the website straight away.

The top of the Overview tab

The Overview tab, box by box

Stage	**Current — selling now** or **Completed**. Completed developments move to the Completed developments page by themselves.
Year completed	Only needed once the development is completed. Completed developments are listed newest first.
Location *	The village or area then the town, for example **Woodville, Swadlincote**. Shown under the name and used by Google.
Postcode	Used for the map, the directions link and local searches on Google. Worth filling in as soon as you have it.
Map search	Only needed when there is no postcode yet. Type what Google Maps should search for, such as **Brunt Lane, Woodville**.
Main photo *	The large photo at the top of the development page. It is also used on the home page and in listings. Choose a wide landscape photo.
Headline	One line under the name at the top of the page, such as **Thirteen four-bedroom homes around a private cul-de-sac**.
Short summary	One or two sentences for the home page and the developments pages.
Description	The main text about the development. Write it like a brochure: the homes, the setting and what is nearby. A few short paragraphs work best.
Key features	Short points such as **En-suite to every principal bedroom**. Press Add feature for each one.
Gallery	Extra photos shown in the gallery on the development page. Press Add to gallery and choose several at once. Drag them to change the order.

6 The interactive site plan

When a development has a site plan visitors can hover over each house to see its house type, room sizes and availability. You set this up once per development.

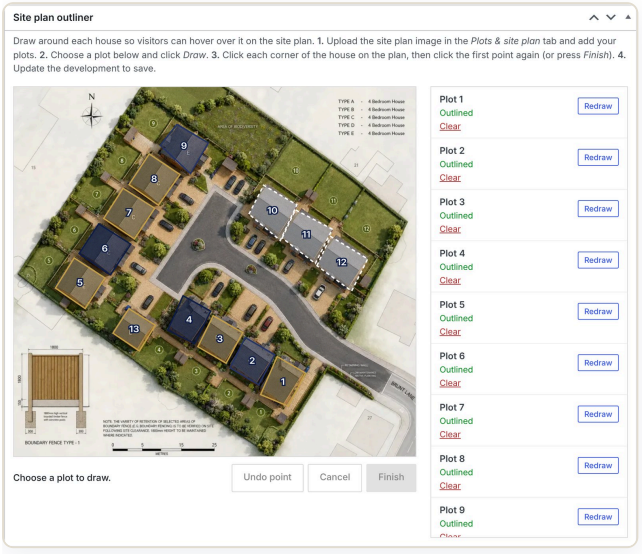

Uploading the site plan

1. Open the development and click the **Plots & site plan** tab.
2. Under **Site plan image** press Add Image and upload the plan. A clear top-down image works best, such as a JPG or PNG exported from the architect's drawing or a coloured site plan.
3. Make sure every plot has a row in the Plots table then press Update.

Drawing around each house

Below the development details is a box called **Site plan outliner**. It shows your site plan next to the list of plots.

> **TIP**
>
> Four clicks around the roof is usually enough. The outline doesn't need to be perfect. It only needs to cover the house so visitors can hover over it. To remove an outline click **Clear** under the plot's name.

The Site plan outliner. Outlined plots show in colour on the plan.

1. Click **Draw** next to a plot in the list on the right (it says **Redraw** if the plot already has an outline).
2. Click each corner of that house on the plan. A line follows your clicks.
3. Click the first point again to close the shape, or press **Finish**. Use **Undo point** if you misclick and **Cancel** to start again.
4. Repeat for each plot then press Update to save.

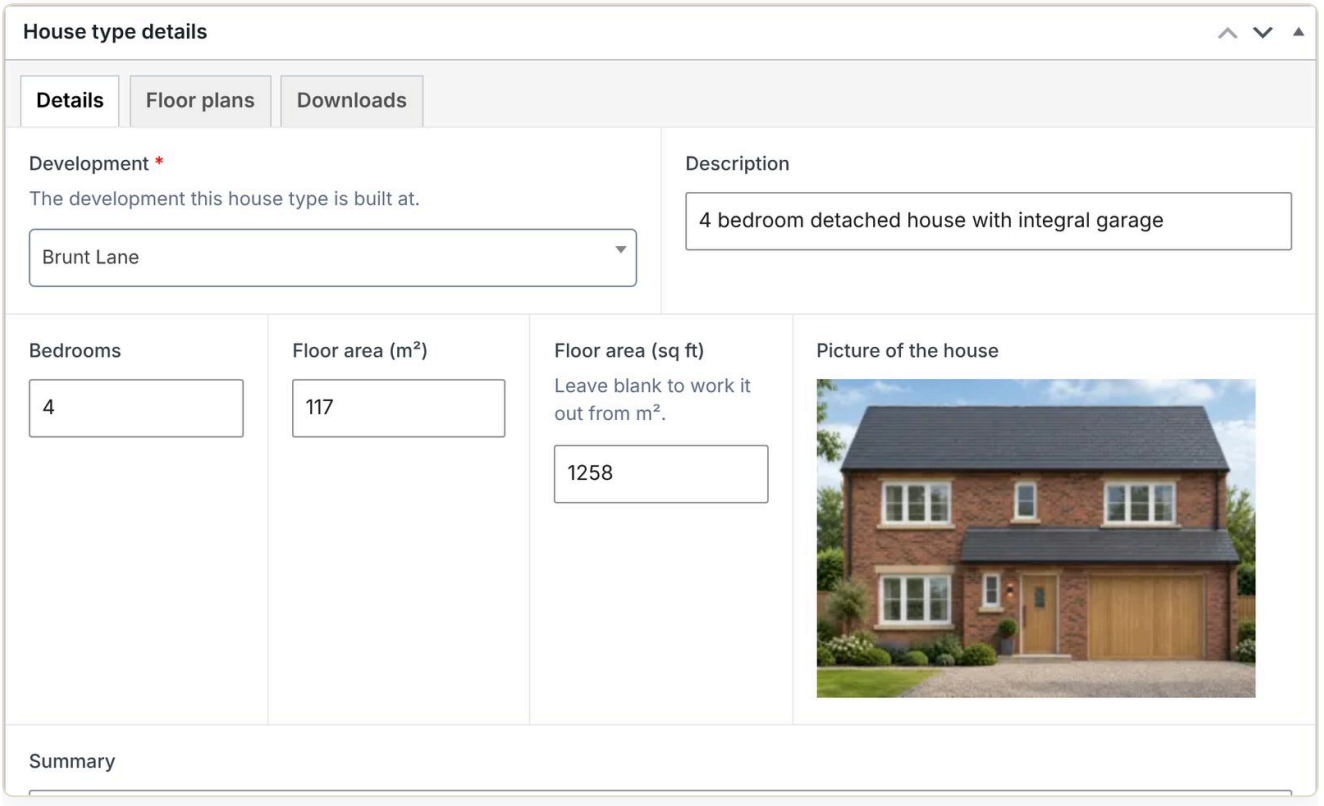

7 House types

Each house type has its own page with the picture, room sizes, floor plans and a PDF to download. Every plot of that type links to it.

1. In the left-hand menu hover over **Developments** and click **House types**.
2. Press Add new house type at the top.
3. Type its name in the title box, for example **Type C** or **The Ashby**.
4. Fill in the three tabs described below.
5. Press Publish. The house type can now be chosen in the plots table of its development.

The web address includes the development's name, for example **/house-types/brunt-lane-type-c/**, so the same name such as Type A can be used again on another development.

Details tab

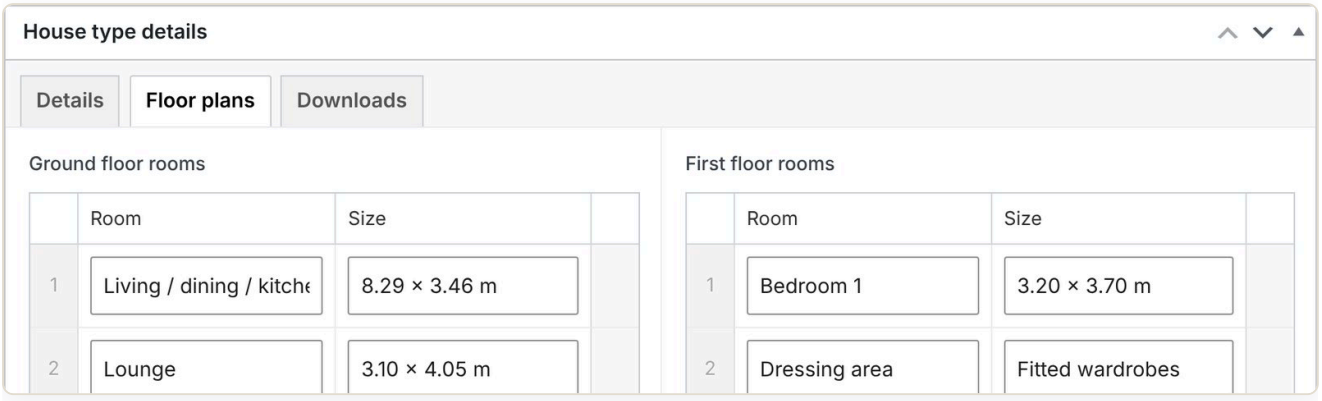

Development *	The development this house type is built at.
Description	A short line such as **4 bedroom detached house with integral garage**.
Bedrooms	The number of bedrooms.

Floor area (m²)	From the architect's drawings. Leave **Floor area (sq ft)** empty and the website works it out for you.
Picture of the house	A CGI or photo of the front of the home.
Summary and Highlights	A sentence or two about the home then a few short highlights such as **Integral single garage**.

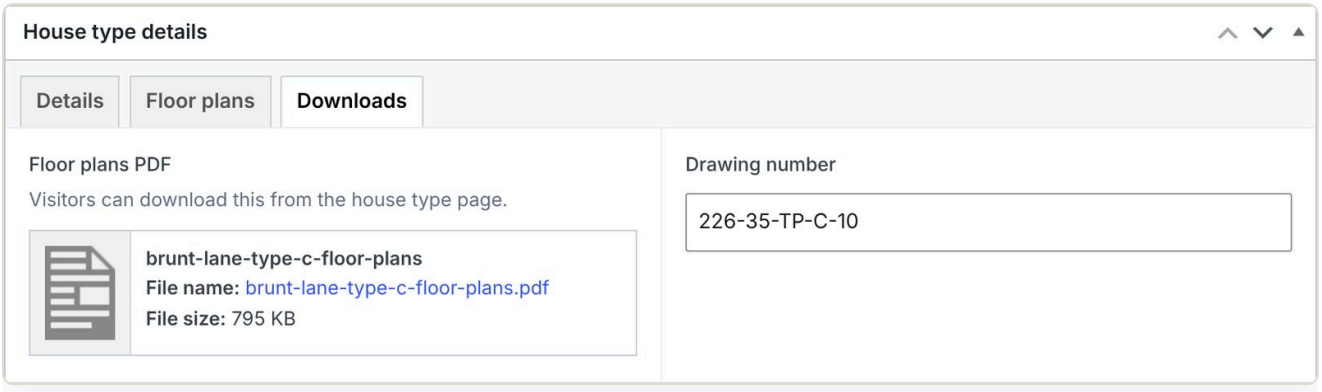

Floor plans tab

Add each room with its size, one row per room, for the ground floor and the first floor. Write sizes as they appear on the drawings, such as **3.10 × 4.05 m**. Then upload the ground floor plan, the first floor plan and the elevations as images.

Downloads tab

Upload the floor plans PDF here so visitors can download it. The **Drawing number** is optional and is shown next to the download.

GOOD TO KNOW

A house type with no picture, floor plans or PDF is kept out of Google until one of them is added. It still works on the website. This stops Google seeing a nearly empty page.

8 Finishing a development

When the last home is sold move the development to your completed developments. Nothing is deleted.

1. Open the development. On the **Overview** tab set **Stage** to **Completed**.
2. Enter the **Year completed**.
3. Press Update. The development moves from the Current developments page to the Completed developments page by itself.

This is a good moment to add a few photos of the finished homes to the gallery. Completed developments show buyers your track record.

Removing a development

To take a development off the website altogether open it and click **Move to Bin** under the Update button. It stays in **Developments › Bin** for 30 days in case you need it back. Its house types are separate so move those to the bin too.

9 Company details

Your phone number, email address, office address and the short "about" text are kept in one place and used across the whole website: the header, the footer, the contact page and the business details Google reads. Enquiries from the website's form are sent to the email address saved here.

1. Click **Company details** in the left-hand menu.
2. Change what you need. Put each line of the address on its own line.
3. Press Update.

The **Stats** rows are the figures that count up on the home page, such as **25+ Years building locally**. Each one has a number, what comes after it (such as + or yr) and a label.

10 Photos, PDFs and search engines

Photos

- Upload the original photo at full size. The website makes smaller copies for phones by itself.
- Use wide landscape photos for the main photo and the gallery. JPG is the best format for photos.
- Give files a sensible name before uploading, such as **brunt-lane-kitchen.jpg** rather than **IMG_4021.jpg**. Google reads file names.
- After uploading a photo fill in its **Alternative text** on the right of the upload screen. Describe what it shows in a few words, such as **Open-plan kitchen at Brunt Lane**. This helps blind visitors and Google.
- Only use photos you own or have permission to use.

PDFs

Keep brochures and floor plan PDFs under about 10 MB so they download quickly on a phone. Architects can usually export a smaller version if needed.

Search engines (SEO)

The website writes the Google title, description and sharing image for every development and house type from the details you enter. For example **Brunt Lane, Woodville — New 4 Bed Homes for Sale**. There is nothing extra to fill in.

Below each development you will see a **Rank Math SEO** box. You can ignore it. Anything typed into it replaces the automatic title or description, so only use it if you want to word one yourself. The coloured SEO score next to the Update button can also be ignored. It measures things such as word count against generic blog rules rather than how well a development page works.

> WHAT HELPS MOST
>
> Google ranks pages that answer a buyer's questions. An accurate location and postcode, a good description, real photos and up-to-date availability do far more than any SEO setting.

11 Quick reference

I WANT TO…	WHERE TO DO IT
Mark a home reserved or sold	Developments › the development › **Plots & site plan** › change **Status** › Update
Change a price	Same table › **Price** (numbers only) › Update
Add a plot	Same table › **Add plot** › fill in the row › Update
Outline a plot on the site plan	**Site plan outliner** below the table › Draw › click the corners › Update
Start a new development	Developments › **Add new development** › Overview then Plots & site plan › Publish
Add a house type	Developments › **House types** › Add new house type › three tabs › Publish
Finish a development	Overview › **Stage** › Completed › Year completed › Update
Change the phone, email or address	**Company details** › Update
Change the home page text or photos	Pages › Home › **Edit with Elementor**
See or reply to enquiries	They arrive by email. A copy is kept under **WPForms › Entries**

12 If something doesn't look right

My change isn't showing	Check you pressed Update. Then refresh the page in your browser. The website clears its stored copies of every page when you save a development or house type. They are rebuilt within a minute or two so the first visit afterwards can be slightly slower.
A plot doesn't show the right house type	Check the **House type** column in that plot's row. If the type isn't in the list make sure the house type's **Development** is set to this development.
Hovering over a plot on the plan does nothing	That plot has no outline yet. Draw one in the Site plan outliner (section 6).
The "from" price looks wrong	It is the lowest price of the plots marked Available or Coming soon. Check those prices and statuses.
A development is on the wrong page	Check its **Stage** on the Overview tab.
I deleted something by mistake	Developments and house types go to the bin for 30 days. Open the **Bin** link above the list and click **Restore**.

NEED A HAND?

If you get stuck or want something on the website changed that isn't covered here just get in touch with your web developer. Changes to the layout and design of pages are best left to us.
